

Working, learning, leading & thriving
in today's constantly changing,
exponential world.

new mindsets & lenses may be required.

The past

18th, 19th, 20th C
infrastructure

The era(s) of
relative stability
→ Skills lasted a lifetime.
Career paths were clear

then

The Big Shift Happened

Social, Work & Learning Practices
evolve around new technologies

21st C infrastructure

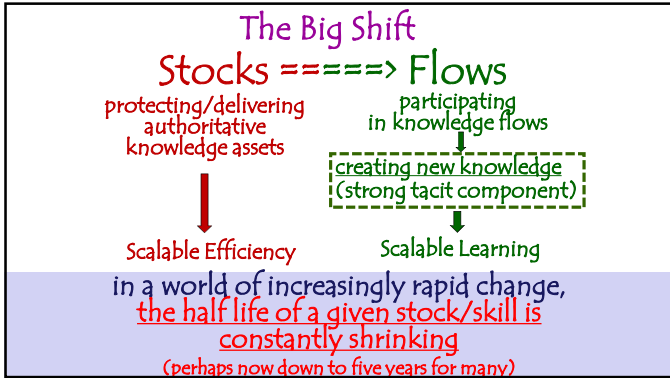

rapid set of punctuated jumps
for the next 20-40 years

yesterday's best practices
are rapidly becoming outmoded.

rapid set of punctuated jumps
for the next 20-40 years

How we come to learn and explore
has really changed.

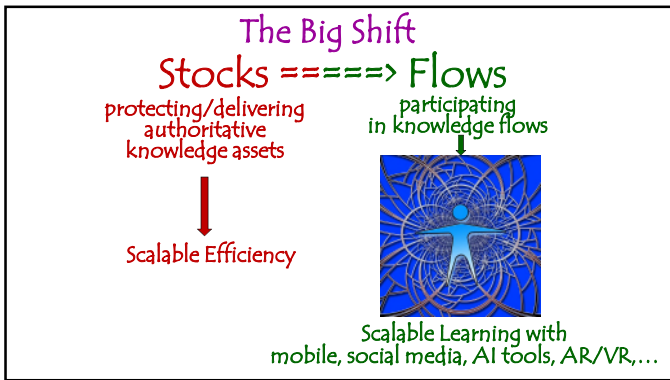

Too Big to Know:
By david Weinberger (Jan, 2012)

"We used to know how to know. We got our answers from books or experts. We'd nail down the facts and move on. We even had canons."

"But in the Internet age, knowledge has moved onto networks. There's more knowledge than ever, but it's different. Topics have no boundaries, and nobody agrees on anything."

We need new strategies and tools to learn/work/create meaning in our lives

- critical skills for a white water world**
- skillfully reading the currents and disturbances of the context,
 - interpreting the flows for what they reveal of what lies beneath the surface,
 - leveraging the currents, disturbances and flows for amplified action.

What kind of learners
do we need for this
white water world??

We need
Entrepreneurial Learners

Which is NOT the same
as being an entrepreneur!

Dispositions of an entrepreneurial learner.

- > Always, questing, connecting, probing.
- > Deeply curious and listening to others.
- > Always learning with and from others.
- > Reads contexts as much as content.
- > Thrives outside of the formal curriculum
- > Reflects on performance with the help of cohorts

Dispositions of an entrepreneurial learner.

- > Always, questing, connecting, probing.
- > Deeply curious and listening to others.
- > Always learning with and from others.
- > Reads contexts as much as content.
- > Thrives outside of the formal curriculum
- > Reflects on performance with the help of cohorts

Connecting with others both inside & outside of your own
silos, work groups, tribe and organization

In today's world
AQ may more important than IQ

Adaptive Quotient -- AQ

The Inevitable by Kevin Kelly

"The cycle of obsolescence is accelerating (the average
lifespan of a phone app is a mere 30 days!), you won't
have time to master anything before it is displaced.

The Inevitable by Kevin Kelly

"The cycle of obsolescence is accelerating (the average lifespan of a phone app is a mere 30 days!), you won't have time to master anything before it is displaced.

Endless Newbie is the new default for everyone, no matter your age or experience. That should keep us humble."

We also need:

New approaches to learning,

Ah, a blended epistemology for the white water world.

Cartesian View of Learning

Traditional Approach:
learning-about =====> learning-to-be

For lifelong learning
a better starting position
might be:

A more Social View of Learning

understanding is socially constructed.
making knowledge personal

Changing the Flow

Learning-about Explicit

Learning-to-be Tacit

Constantly refreshing a practice-in-situ
Productive Inquiry : I get stuck, need to know more.

Changing the Flow

Learning-about Explicit

Learning-to-be Tacit

Med Schools
Duke Univ. Med School - Singapore
Your new Med School - Pasadena

Constantly refreshing a practice-in-situ
Productive Inquiry : I get stuck, need to know more.

also

Reverse Mentorship

Especially important in an exponential world..
but it can also be humbling.

and of course

No, Grandma,
Listen,

Was a wake up call to me

**Hackamonth--
silo busting at Facebook**

Once a year, engineers at Facebook are encouraged — but not required — to ditch their jobs and try something else out within the company for thirty days, called "Hackamonth."

And building deeper communities of practice across the whole company.

In today's world exceptions are the coin of the realm especially in mission critical (e.g. ER) practices where improvisations often replace business processes and "best practices".

Mission critical operations are often best viewed as a tribe of tribes each with its own practices, language, beliefs, tools and power. More accurately: where doctors form their own tribe and likewise for nurses and so on. So we really have something closer to a tribe of tribes

Given the emerging capabilities of networked everything (via mobile, internet of things (iot), IIot,...) this provides a chance for technology enhanced reflective practicums to support accelerated (situated) learning – that is learning from exceptions.

But for this to work getting multiple tribes to listen and honor each other is key. Sadly technology can help but not solve this problem. A willingness to speak truth to power is crucial

Zooming Out

In our new exponential world maybe we need to broaden our own lenses In how we work, learn and play.

A blended way of knowing for a world with accelerating change

Homo Ludens

a highly nuanced concept of play

- as in permission to fail, fail and fail again and then get it right;
- as play of imagination – poetry
- as in an epiphany – suddenly falling in place as in solving a riddle.

Learning as riddles,
leading to a reframing the world.

Extending the Blend even further

- probing & pushing boundaries
- invention within a space of rules
- deep tinkering

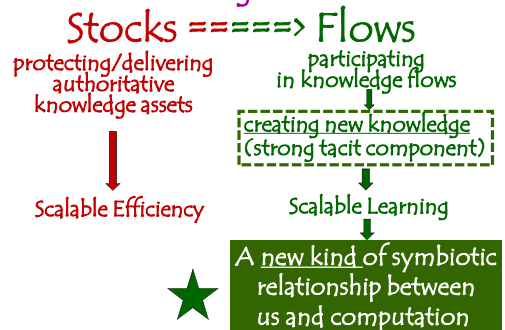

Extending the Blend even further

- Interrogating context as a form of 'play'
- > Like a detective
- > Like a historian (making sense)

The Big Shift

Leaping forward..

IA vs AI
Intelligence augmentation vs Artificial intelligence

Working with the machine, not against it
And learning from it as it learns from you.

Garry Kasparov
Grand Master

Deep Blue

VS

1996 vs 1997

Freestyle chess tournament

The winners racing with the machine
as a generative dance between us and machine.

Zack Stephen and Steven Cramton

Google AI to play live Go match against world champion

March 9th to 15th - 1 million dollar prize

Deep Learning Machines

A key property of *deep* is that the system is composed of a collection of trainable neural network layers..

But the real catch is that we don't really program these machines. We *train/curate/mentor* them and sometimes they do that to/for themselves.

Cultivating a blended way of knowing & learning with human/machine

homo sapiens + IA
man who knows

homo faber + IA
man who makes

imagination

homo ludens + IA
man who plays

Indwelling across a distributed community of practice -
creating a networked imagination

Beware

"The real difficulty in changing any enterprise lies not in developing new ideas, but in escaping from the old ones"
John Maynard Keynes:

Changing practices is hard, hard, hard!
(especially one's own practices)
